---

Dear Hiring Team,

I am writing to apply for the Junior Full Stack Developer position at FINETO. As a recent Electrical and Computer Engineering (Computer Stream) graduate from Addis Ababa University (CGPA 3.68, Great Distinction) with hands-on full-stack development experience, I was glad to see that the role gives preference to candidates with an Electrical and Computer Engineering background, and I believe my combination of engineering fundamentals and practical software development makes me a strong fit for your team.

In my project work, I have built complete full-stack applications using React, Next.js, Node.js/Express, and PostgreSQL. This includes an Enterprise Resource Planning (ERP) system with role-based access control, a Library Management System with JWT authentication and Prisma, and LearnHub, a learning platform with separate instructor and student roles and dashboards. These projects gave me direct experience with the responsibilities outlined in your posting — designing and coding features, debugging and fixing defects, working with relational databases, and documenting my development process. I am comfortable with Git-based version control and have worked through core web security practices such as guarding against XSS, SQL injection, and CSRF, which I understand matters to a team focused on delivering reliable software to clients.

Beyond web development, my five-month internship at Ethiopia's Information Network Security Administration (INSA) exposed me to network administration and security fundamentals, and my work as a data encoder on Ethiopia's National ID Program sharpened my attention to detail and reliability when handling large-scale, high-responsibility data. I am a fast learner who enjoys picking up new tools and frameworks, and I work well within cross-functional teams — qualities I look forward to bringing to FINETO's onsite development team in Addis Ababa.

I would welcome the opportunity to discuss how my background can contribute to your projects. Thank you for considering my application — I have attached my resume and portfolio link for your review, and I look forward to the possibility of speaking with you.

Sincerely,

Eyasu Kerie
